(54) Title: PROCESS FOR HYDROPHOBICIZING PARTICLES, AND THEIR USE IN POLYMER DISPERSIONS

(57) Abstract

Particles are hydrophobicized by *in situ* formation of a moiety containing amino and silane groups. The invention is particularly useful for treating hydrophilic inorganic particles. The treated particles can be used, for example, as a compound agent for polymers. The production and use of a predispersion or concentrate comprising a major amount of the treated particles and a binder is also described. Further, the production and use of masterbatch comprising a minor amount of the treated particles and a rubber is also described.
